• CodeTitan

BGT

BRAND GOVERNANCE TECHNOLOGY

A practical pre-publication check
for brand-aligned content.

ONE BRAND. ONE STANDARD.
CLEARER CONTENT DECISIONS.

TEAM OPTIMUS PRIME

ROUND 1

THE PLAN

Proposal • MVP scope • Build plan

The problem is not creating content. It is keeping it on-brand.

Organizations publish across many channels, but their brand rules often live in PDFs, slide decks, shared folders and people’s memory.

A writer may use an outdated product claim. A designer may pick an old logo. A social post may sound unlike the brand. Reviewers then compare each draft with scattered guidance—again and again.

THE GAP

Guidelines explain the standard; they do not always make checking a draft quick or consistent.

.

01 VOICE

Tone drift

Copy sounds too casual, too formal or inconsistent with approved messaging.

02 IDENTITY

Asset mismatch

Old logos, colours, fonts or unapproved imagery can slip into a campaign.

03 FACTS

Unauthentic claims

Product details, prices or promises may not match approved information.

04 PROCESS

Repeated manual work

Reviewers repeatedly search documents and explain the same corrections.

Who feels the problem—and what will we solve first?

PRIMARY USER

Content creator

Writers and social teams who need useful feedback before a draft is shared or published.

REVIEWER

Brand / marketing manager

People who check tone, terminology, claims and consistency across campaigns.

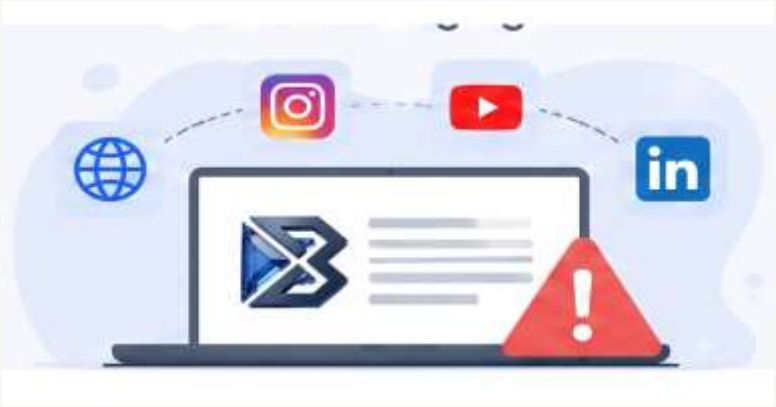

SECONDARY USER

Legal / compliance

Reviewers who need unsupported or sensitive claims surfaced for human verification.

THE FIRST PROBLEM WE WILL TACKLE

A small team needs a simple way to compare draft text with its own approved brand rules and product facts—then see exactly why something was flagged.

BGT is a review assistant, not an auto-publisher.

A focused web tool that checks a draft against the organisation’s own approved knowledge.

01

STORE

Upload brand rules, approved terms and verified product facts.

›

02

VERIFICATION

Paste text or upload a supported document.

›

03

EXPLAIN

See each possible issue with the rule or fact behind it.

›

04

SUGGEST

Review an editable correction that keeps the writer’s intent.

›

05

DECIDE

A person accepts, edits or dismisses every finding.

CONTROL PRINCIPLE BGT recommends and explains. The organization makes the final decision.
HUMAN TOUCH IS THE FINAL TOUCH

The complete product workflow

1 BRAND SETUP

Admin adds guidelines, approved terms, examples and verified facts.

→

2 CONTENT INPUT

Creator pastes draft text or uploads a supported DOCX / PDF.

→

3 TEXT EXTRACTION

System extracts text and separates it into reviewable sections.

→

4 RULE CHECKS

Exact terms and facts are checked against stored, approved entries.

5 AI-ASSISTED REVIEW

Language model suggests possible tone or messaging issues.

→

6 EVIDENCE & FIX

Each finding shows the matched rule/source and an editable suggestion.

→

7 HUMAN TOUCH

Reviewer accepts, edits or dismisses each finding.

→

8 REVIEW RECORD

System saves the decision summary for later reference.

Human checkpoint: no automatic publication. A flag is a review prompt—not proof of a violation.

What a useful finding should look like

ILLUSTRATIVE

DRAFT TEXT

“Our new drink is guaranteed to boost energy all day.”

APPROVED BRAND FACT

“Contains 80 mg of caffeine per serving.”

BGT REVIEW RESULT

NEEDS REVIEW

Potential unsupported performance claim

Why flagged: the draft promises an all-day energy effect, but the stored approved fact only confirms caffeine quantity.

Suggested edit: “Each serving contains 80 mg of caffeine.”

The example is fictional. The system must show the source used and let a reviewer reject an incorrect flag.

MVP features: six things we can demonstrate

FEATURE 01

Brand knowledge base

Store rules, terminology and approved facts.

FEATURE 02

Text compliance checks

Match exact terms and facts; assess tone against supplied guidance.

FEATURE 03

Evidence-linked findings

Show the relevant rule or approved source beside each flag.Question likw Why they occur,What the problem can easily be answered.

FEATURE 04

Editable suggestions

Offer alternatives without overwriting the original draft.

FEATURE 05

Human review panel

Accept, edit or dismiss findings with a recorded decision.No boundation to apply all changes.

FEATURE 06

Review summary

Show flagged items, decisions and a simple final status.

OUT OF MVP: image/logo recognition, advanced analytics, multi-stage approvals and publishing integrations.

A stack chosen for a buildable student prototype

FRONTEND

HTML • CSS • JavaScript

Responsive input, findings and reviewer screens.

BACKEND

Python • FastAPI

API endpoints, file handling and review orchestration.

DATA

SQLite first

Store brand rules, facts, users and review outcomes.

CHECK ENGINE

Rule checks + LLM API

Deterministic matching for exact data; AI for language suggestions.

DOCUMENTS

python-docx • PyMuPDF

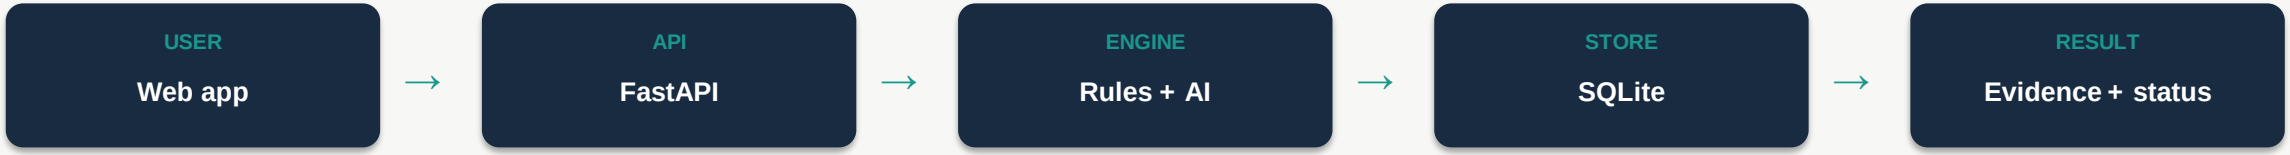

Extract text from DOCX and PDF files.

COLLABORATION

Git • GitHub

Version control, issues and team integration.

DATA FLOW

Clear ownership, shared responsibility

TEAM LEADER

Prabhat Maurya

- Coordinate scope, deadlines and submission
- Lead problem framing and user research
- Track tasks and lead the demo

MEMBER 2

Rajveer Pratap Singh

- Create user flow and wireframes
- Implement review and report views
- Test usability with sample users

MEMBER 3

Rahul Kumar Maurya

- Implement rules and terminology checks
- Integrate AI service if feasible
- Test evidence quality and edge cases

ALL MEMBERS: research, test, document, prepare the demo and understand the full product—not only their assigned module.

Development plan across all three rounds

Round 1

DEFINE & VALIDATE

- Finalise the user problem and MVP boundary
- Collect sample brand rules and test cases
- Sketch screens and architecture
- Confirm roles and demo story

DELIVERABLE: clear proposal + prototype plan

Round 2

BUILD THE CORE

- Build brand-rule and fact storage
- Create draft input and findings screens
- Implement exact-match checks
- Add AI-assisted tone review if feasible
- Test with fictional brand examples

DELIVERABLE: working text-review flow

Round 3

TEST & PRESENT

- Improve accuracy and usability
- Add human decisions and review summary
- Test false positives and missing evidence
- Document privacy and limitations
- Prepare a repeatable live demo

DELIVERABLE: tested MVP + demo

Impact we intend to measure—not assume

CONSISTENCY	**More drafts checked against the same approved rules.**
CLARITY	**Creators see why something was flagged and what source applies.**
REVIEW EFFORT	**Less time spent repeatedly searching guideline documents.**
HUMAN CONFIDENCE	**Reviewers retain control and can challenge incorrect flags.**

HOW WE WILL EVALUATE THE MVP

1. Run a fixed set of sample drafts with known rule mismatches.
2. Check whether each finding points to the correct rule or fact.
3. Record false positives and missed issues for review.
4. Ask test users whether explanations and edits are useful.
5. Compare review time with a simple manual-check baseline.

After the event: expand only what users validate

VISUAL CHECKS

Logo, colour, typography and approved imagery.

MORE FORMATS

Slides, images and additional document types.

TEAM WORKFLOWS

Roles, comments, version history and approvals.

INTEGRATIONS

Content management, design and publishing tools.

GOVERNANCE INSIGHTS

Recurring issue patterns and guideline gaps.

BGT • BRAND GOVERNANCE TECHNOLOGY

Make brand rules usable at the moment content is reviewed.

BGT brings approved guidelines, draft content and human review into one explainable workflow. It starts with text-first checks and grows only when testing shows where it adds value.

WHAT WE WILL PROVE IN THE HACKATHON

Can a small team build a working tool that flags selected brand-rule mismatches, shows its evidence and lets a human make the final call?

AI Tools & Research Disclosure

During the preparation of this proposal, ChatGPT was used to assist with brainstorming, organising content and designing the presentation layout. Microsoft PowerPoint and other relevant digital resources were used for presentation development. Public documentation from Frontify, Bynder and W3C was identified as a starting point for research. All AI-assisted content and external information will be reviewed and verified by the team. The team takes full responsibility for the originality, accuracy and final submission.
